

**For sale:**

# **VOLVO PV444 A-model 1947**

Volvo PV444 was produced continuous from 1947 until 1965. Total 440.000 cars!

By developing this car during the Second World War Volvo managed to be one of the leading car-manufacturer. The 444 is Volvo's first car constructed with self-supported car body. A brand new engine with 40 Hp and 4 cylinders overhead valve engine was designed. The A-model is different from all other PV's. All A-cars are black outside and green/beige inside. The instruments are placed in the middle of the instrument panel. The bumpers are in one piece unlike all other PV's.

About 12000 cars are produced of this model during the years 1947 until 1950 and all cars in this period are called "the 1947 A-model".

**Now you got the chance to be the lucky owner of this wonderful car. The car on the picture is imported to Norway from Sweden in 2002. This old Volvo classic car is in good condition. It has not been restored and has the "patina" that many enthusiasts enjoy. The engine needs a loving hand.**

I'm sorry to sell but have made up my mind. Another Volvo PV-project is coming up.

The car will be yours if you pay me either of this:

**EUR 7.100,- Euro**  
**USD 8.250,- American dollars**  
**GBP 5.000,- British Pounds**
